

ONE HUNDRED SEVENTEENTH CONGRESS  
**Congress of the United States**  
**House of Representatives**  
COMMITTEE ON ENERGY AND COMMERCE  
2125 RAYBURN HOUSE OFFICE BUILDING  
WASHINGTON, DC 20515-6115

Majority (202) 225-2927  
Minority (202) 225-3641

August 10, 2022

The Honorable Alan Davidson  
Assistant Secretary of Commerce for Communications and Information  
National Telecommunications and Information Administration  
1401 Constitution Avenue NW  
Washington, DC 20230

Dear Assistant Secretary Davidson:

We write to request a briefing from your agency related to the open-source software vulnerability—Apache Log4j. The ubiquitous nature of this vulnerability and the hundreds of thousands of known exploits since its disclosure raise concerns about how the United States government is identifying and mitigating potential compromises to its network security.

In late November 2021, a member of the Alibaba Cloud Security Team discovered the Log4j vulnerability and reported the vulnerability to the Apache Software Foundation (ASF).<sup>1</sup> Shortly thereafter, the Cybersecurity and Infrastructure Security Agency (CISA) warned federal agencies that their systems and systems they interface with may be exposed to this vulnerability.<sup>2</sup> After the initial public disclosure, security researchers noticed nation-state threat actors, including China, Russia, Iran, North Korea, and Turkey, attempting to exploit the vulnerability.<sup>3</sup> The Apache Software Foundation released a full solution to the Log4j vulnerability approximately two weeks after the disclosure.<sup>4</sup>

On December 11, 2021, CISA Director Jen Easterly stated that “this vulnerability, which is being widely exploited by a growing set of threat actors, presents an urgent challenge to

network defenders given its broad use.”<sup>5</sup> She later added, “[t]o be clear, this vulnerability poses a severe risk. We will only minimize potential impacts through collaborative efforts between government and the private sector.”<sup>6</sup>

On December 17, 2021, CISA issued Emergency Directive (ED) 22-02 requiring federal civilian departments and agencies to assess their internet-facing network assets for the Apache Log4j vulnerabilities and immediately patch these systems or implement other appropriate mitigation measures.<sup>7</sup> On April 8, 2022, CISA closed ED 22-02 and transitioned the required actions to Binding Operational Directive (BOD 22-01), which means these actions are now mandatory for all federal departments and agencies.<sup>8</sup> Additionally, the Federal Bureau of Investigation asked organizations and agencies to report any compromises that result from the Log4j vulnerability.<sup>9</sup>

Over the past several years, the Committee has done extensive work on cyber threats, including hearings and investigations examining the information-security programs and controls over key computer systems and networks at multiple agencies under the Committee’s jurisdiction. Because the Log4j vulnerability is widespread and can affect enterprise applications, embedded systems, and their sub-components, the Committee is seeking to gain a comprehensive understanding of the scope of the vulnerability and actions being taken to mitigate its effects. The risk to federal network security is especially concerning because nation-state threat actors have attempted to exploit this Log4j vulnerability.

Accordingly, we request a staff briefing to discuss your agency’s response to the Log4j vulnerability by August 24, 2022, including the following questions:

1. When did your agency first learn of the Log4j vulnerability?
2. What specific actions has your agency taken in response to CISA’s guidance in December 2021 and subsequent directive on April 8, 2022, regarding the Log4j vulnerability?
3. What tools does your agency employ to detect all instances of the Log4j vulnerability on your networks? What is your agency’s schedule for identifying the Log4j vulnerability?

- a. Does your agency track instances of new download of Apache Log4j through the agency's network? If so, what steps does the agency take to ensure that only patched versions of Log4j are downloaded and utilized?
  - b. Does your agency have a software bill of materials (S-BOM) that identifies all of its assets? If so, how often is it updated?
4. Does your agency employ software that utilizes Apache Log4j? If so, how many software products employed by the agency include the Log4j vulnerability?
- a. How many of those software products have adopted the patch for the Log4j vulnerability?
  - b. What actions is your agency taking to engage with private sector partners to provide recommended practices for patch management of the Log4j vulnerability?
5. Has your agency been impacted by a compromise or exploitation of the Log4j vulnerability? If so, when was your agency first compromised, when did you detect the compromise, what was the extent of the compromise, and how did the agency address the compromise?
6. What incident alert thresholds does your agency have for potential compromises generally, and what are your requirements for escalating and reporting anomalies?
7. Does your agency have a specific plan to identify and remediate, on an ongoing basis, software that it uses to ensure the agency is not currently using software vulnerable to a cyber threat?

Your assistance in this urgent matter is appreciated. If you have any questions, please contact Alan Slobodin of the Minority Committee staff and Will McAuliffe of the Majority Committee staff.

Sincerely,

Frank Pallone, Jr.
